may live to see better days, when some system can be enforced by the proper tone of parliamentary action to repress the vagaries, or, at least, to moderate the awful speeches which render things so painful. If the present state of affairs is to continue, every debate will be a trial of physical endurance, and persons obliged to hold them in their seats. A Brown Stylized, who passed his life upon a pillar, might form a fair model for some of our members, who in the arrangement of the new House a scheme will be devised to afford a quiet retreat. It has been said that duelling is unequal because the surface at which the duellists aim is unequal. The space presented by the tall fat man may be much greater than that offered by the dwarf who might be the challenger. The power of legislators will soon become a question of physical strength, unless the House, while preserving the freedom of debate, also cares for the health of its weaker members. Any person gazing at the more finished Caricatures of the House will see precisely on what plan the House of Representatives should be constructed. In the centre is a large space which the lodgers and travellers occupy in common. There are beasts clean and unclean. Men of all nations and habits meet together and deliver themselves of their burdens. All around the building are dormitories into which each traveller may retreat, and where, secure from external interruption, he may enjoy that which our members so much require—

Nature's sweet restorer, balmy sleep.

With such an arrangement "counting out" would not be so easy. The ringing of the bell would fall upon the accustomed ear just as the flapping of a sail rouses the mariner from his deepest slumber, and calls him to the deck—if we may credit Cooper. Thus we should preserve our public men from the martyrdom they now suffer. They might take their "watches," and wait for the moment of decision. Unless some such plan be taken, it is clear we shall be obliged to separate the hours of business from the hours of debate, and to adopt the practical remedy for the ludicrousness which has been discovered by the Legislature of Washington.

In a work of old AUBREY's, the celebrated antiquarian, we have a description of Sir Walter Raleigh in his early life. He was fond of rather boisterous jokes, and had a companion whose voice was compared to a drum, and whose vociferous talk was incessant. Having vainly tried to subdue him Sir Walter Raleigh closed his mouth by interlarding the upper and lower portion of his beard, and by one mighty application of wax, sealed up peccant member. The fashion of beards is not sufficiently naturalised to make this remedy altogether practicable; but even in the House the experiment might perhaps be tried.

In sober sadness, the present police arrangements of the House are infinitely defective. Surely it must be the aim of the public men to appear respectable in the eye of the colony. We have seen not with unmixed dissatisfaction the excesses of members of the Opposition. We have full conviction that, more than any effort of ours, they have damaged their cause by the egotism and extravagance of their own adherents. As a party they are at present in utter disorganization, and power is placed still more remote from their leaders. We attribute all this to the most miserable tactics by which they hitherto have been governed. Every step they have taken has been defective in that practical sagacity which, without respect to the nature of the end, accommodates the means to its accomplishment. Until there shall appear some real regard to the question discussed, and a desire to support the moral tone of the House, as equally valuable to all its members, we believe that the aspirants to office may sigh like a furnace, but they will sigh in vain.

We offer these remarks not with any disposition to overlook some strong qualities that are possessed by some who frequently expose themselves to censure. We are not indifferent to their occasional usefulness in throwing light upon points under discussion, or to that ability which, though raw and undisciplined, some of them doubtless display.

ingenious financial schemes for substituting scorpions in lieu of eggs, as a stimulus to the flagging sale of the colonial official.

I leave the subject with but half its iniquity developed, in the hope that a pen more able and less busy than my own, may take it up before the very zealous committee engaged upon it have consumed their time in the composition of those interesting notes the composition of the committee.

The anxiety of the mover to implicate Mr. Parker in the transaction—the prudent repugnance of that gentleman to take part in it—the wrath of Mr. Coward at his refusal to do so—the indignation of Mr. McDonald with a view to the attaching to him a portion of the odium of the acts of this committee, which being in the minority, will be unable to control.

I am, Sir,

Your obediently,

**INTERNAL COMMUNICATION.**  
*To the Editor of the Sydney Morning Herald.*

SIR,—I have the honor to acknowledge the Colonial Treasurer, the other night, in speaking of the exports of the colony, stated that live stock to the value of one million of pounds sterling had been transported from the colony of Victoria during the past year; and I suppose that in making so good a record of the man rather underrated the amount than otherwise.

Now I believe that I keep within bounds when I assert that fully one-half of the stock thus moved from the colony of Victoria was sent to the Lachlan River. And down this last named river this moiety of the stock took their course for about 220 miles on the Government route. This stream is thus rendered the great highway for half a million of the worth of stock annually, for there is no prospect of any cessation or diminution of this traffic taking place, as the route so richly commanded the Victorian markets are almost wholly devoted to fattening the stock, and consequently store cattle from the northern districts are in continued and increasing demand.

That part of the Lachlan which is thus used as a common thoroughfare comprises, almost without an interruption, a long narrow strip of fertile land, cattle runs; and notwithstanding the great amount of injury done by travelling stock eating up the best part of the runs, it sends more fat stock to market of that description to any other tract of country of equal dimensions in the colony.

It is thus very plain that directly and indirectly this tract of country contributes a large share towards the sustenance of the colony. It is the great outlet of the runs in many cases paying a high yearly rental of the same, besides a heavy assessment of so much per head for every beast depastured thereon; and, secondly, by the means of showing those myriads of store stock to travel along, and directly denude of vegetation, the fringe of their runs.

And what return for the wealth thus contributed have the Lachlan squatters got for their munificent Government?—A watch-house and post office. Have they a court-house, watch-house, or police office? Have they roads and bridges kept in good repair? Have they churches, and duly appointed ministers of religion? Alas! no, they have none of these! This ought to excite the most truthful answer to all these enquiries. They have no newspaper to pass the leisure hour, no social or business epistle to comfort them with news domestic, or to let them know what is passing in the world of markets. Thieves and murderers they have, but no court-house or constable; a few troopers are attached, I believe, to the suit of the Crown Land Commissioners, but these gentlemen never appear upon the Lachlan, either by proxy or in person. Besides they have, miles of bridges, which, thanks to the favours of nature, in dry weather are very good, but in wet almost impassable; on these their grateful rulers never expended a copper, and the Lachlan squatters never do without, as there is nowhere a concentrated population, a salaried minister of religion might do much good in this district.

I am, Sir, as a great pity that the outlying districts of the colony are so neglected by the Government, and I think that to this neglect—particularly that of not establishing markets on the inhabited parts—may be attributed a large portion of that indefensible slaughter which we have to witness every year, in the march for nationality, and in the adoption of improvements, to fall in the rear of a much smaller colony, of not one-third its age. Yet, the Victorians not only have the advantage of having almost every part of their young colony, but they bid good-bye to the very soon, the electric telegraph spread over their beautiful land, conveying, with the rapidity of lightning, the news of the day, and of the hour.

Sincerely hoping, Sir, that you will be the reader that I have dwelt too long on these important subjects,

I remain, your obedient servant,

SIR,—Such an expression as the above may be considered rather a strong one, and when I read it at the time I thought it was a little too strong towards each other by hon. members would give a very different and unjust idea to people at a distance as to the character and manners of our legislators. But I have been troubled by a large portion of that indefensible slaughter which we have to witness every year, in the march for nationality, and in the adoption of improvements, to fall in the rear of a much smaller colony, of not one-third its age.
